

FACULTY OF LIFE & ALLIED HEALTH SCIENCES · MSRUAS

Shared Teaching Across the MPH & MHA Programmes

A detailed mapping of the common teaching courses and course contents of the Master of Public Health (097) and Master in Hospital Administration (098) — and how combined classes could be organised with internal and external experts.

Batch 2022 · Prepared for academic planning · August 2026

PEAK COURSE OVERLAP

80 / 82

MPH / MHA CREDITS

2

PROGRAMMES ALIGNED

1 Background & Rationale

The MPH (097) and MHA (098) are both delivered by the Faculty of Life and Allied Health Sciences. Though distinct in purpose — one population-focused, the other institution-focused — they share a substantial core of method and management teaching. This report maps that shared core across the taught (theory) courses only; project work, dissertation, internship and hospital/practical training are excluded, as these are experiential rather than taught components.

THE FOUR STRONGEST SHARED COURSES

Mgmt & Leadership

Near-identical · PHC504B ↔ HAC510C

Biostatistics

Very high · PHC505A ↔ HAC511C

Research Methodology

High · PHC508A ↔ HAC511C

Epidemiology

High · PHC503A ↔ HAC504C

WHY ALIGN NOW

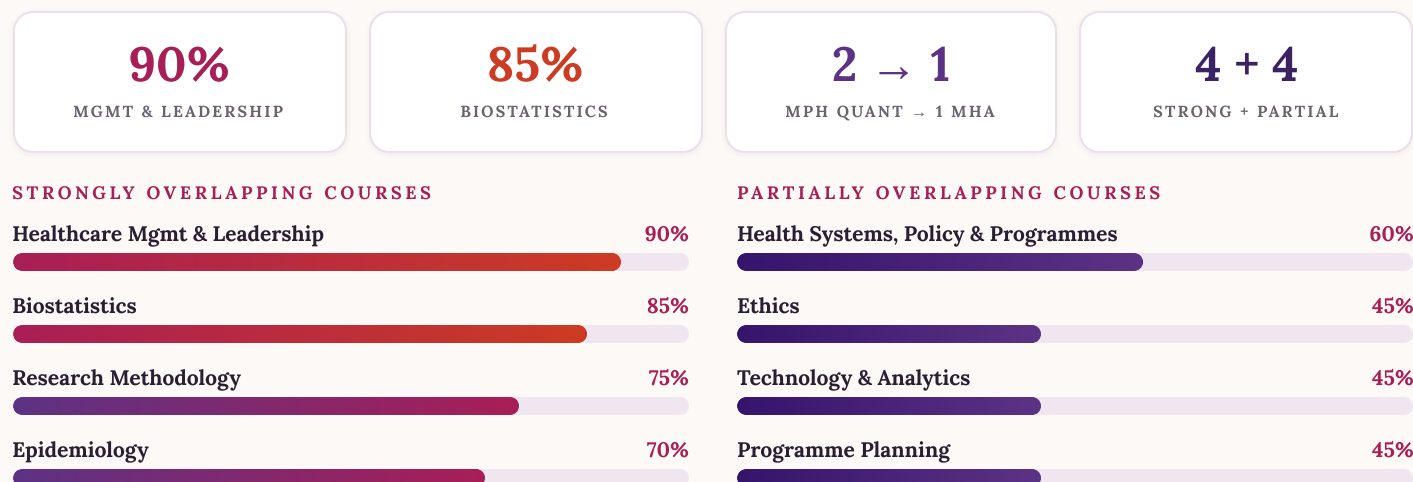

Common courses can be taught once to both cohorts — saving faculty effort, standardising content and exposing students to shared subject experts.

IMMEDIATE OBJECTIVE

Identify every overlapping teaching course, map its content topic-by-topic, and propose how combined classes could be organised and who could lead them.

2 The Overlap in Numbers

Eight teaching themes recur across both programmes. Four overlap strongly enough to be treated as effectively the same course; four more overlap thematically and can share a common foundation with programme-specific extensions.

HOW THE EIGHT THEMES LINE UP

COMMON THEME	MPH COURSE	MHA COURSE	OVERLAP
Healthcare Mgmt & Leadership	PHC504B	HAC510C	Very High
Biostatistics	PHC505A	HAC511C	Very High
Research Methodology	PHC508A	HAC511C	High
Epidemiology	PHC503A	HAC504C	High
Health Systems & Policy	PHC502A	HAC504C	Moderate-High
Ethics	PHC510A	HAC601C	Moderate
Technology & Analytics	PHC602A	HAC602C	Moderate
Programme Planning	PHC603A / PHE601A	HAE608A	Moderate

"Biostatistics and Research Methodology, taught as two courses in the MPH, map almost completely onto the single combined MHA course – the clearest case for a shared quantitative-methods module."

Key finding – Curriculum overlap analysis

3 Detailed Content Mapping — Strong Overlaps (1 of 2)

These courses share the same or near-identical taught content and are the strongest candidates for shared teaching or credit recognition.

Healthcare Management & Leadership

VERY HIGH · ~90%
MPH PHC504B — Healthcare Management and Leadership

MHA HAC510C — Healthcare Management and Leadership

SHARED CONTENT TAUGHT IN BOTH PROGRAMMES

- Organization & organizational behaviour — structure, culture, climate, team dynamics, personality traits
- Management functions — planning, organizing, staffing, directing, coordinating & budgeting
- Leadership concepts, roles and traits of an effective leader
- Leadership theories — Great Man, Trait, Contingency, Situational & Behavioural
- Motivation theories — Maslow, Herzberg, intrinsic vs. extrinsic
- Leadership models — Ruth-Seliger, Maxwell, Bagchi's platform-vs-purpose, sources of power
- Conflict management; leadership challenges & change management

Difference in emphasis · MPH frames delivery around public-health programmes and health systems; MHA frames the same content around hospital administration and the VUCA healthcare context. The course titles are identical.

Biostatistics

VERY HIGH · ~85%
MPH PHC505A — Biostatistics

MHA HAC511C — Biostatistics & Research Methodology (statistics part)

SHARED CONTENT TAUGHT IN BOTH PROGRAMMES

- Definition & scope of statistics in health research
- Data types & scales of measurement; construction of scales; reliability & validity
- Tabulation & graphical presentation of data
- Descriptive statistics — central tendency & dispersion; probability & distributions
- Sample-size estimation
- Probabilistic sampling — simple random, systematic, stratified, cluster
- Non-probabilistic sampling — convenience, quota, purposive, snowball
- Inferential statistics — hypothesis testing, p-value, confidence intervals
- Pearson's & Spearman's correlation; linear & logistic (binary/multinomial) regression

Difference in emphasis · Wording is near-verbatim across both programmes. MHA binds the research-methodology units into this same course, whereas MPH teaches Research Methodology as a separate course (PHC508A).

3 Detailed Content Mapping — Strong Overlaps (2 of 2)

Research Methodology

HIGH · ~75%

MPH PHC508A — Research Methodology in Public Health

MHA HAC511C — Biostatistics & Research Methodology (methods part)

SHARED CONTENT TAUGHT IN BOTH PROGRAMMES

- Meaning & types of research; steps in conducting research
- Research problem, objectives & hypothesis formulation
- Literature review
- Research methods & methodology; study design selection
- Sample size & sampling technique
- Data-collection tools
- Research ethics
- Proposal development, report writing & dissemination / referencing

Difference in emphasis · MPH is broader — dedicated units on qualitative & mixed-methods designs, research paradigms (ontology/epistemology), PRISMA and trustworthiness. MHA covers the core research process at an applied, hospital level.

Epidemiology

HIGH · ~70%

MPH PHC503A — Epidemiology

MHA HAC504C — Epidemiology & Public Health Administration (epi part)

SHARED CONTENT TAUGHT IN BOTH PROGRAMMES

- Scope of epidemiology; measures of disease frequency & association
- Study designs — ecological/geographical, case-control, cohort, intervention & RCTs
- Random error / chance; bias; confounding; interaction & effect modification
- Association & causation; validity & reliability
- Screening
- Natural history of disease; concept of health & disease

Difference in emphasis · MPH extends into advanced epidemiology (chronic, infectious, nutritional, environmental, psychiatric). MHA extends into public-health administration — the health-care delivery system, national programmes and policy.

4 Detailed Content Mapping – Partial Overlaps (1 of 2)

These courses share substantial thematic content but differ in emphasis or are packaged differently across the two programmes.

Health Systems, Policy & National Programmes

MODERATE-HIGH
MPH PHC502A – Public Health Systems & Health Policy

MHA HAC504C – Epidemiology & Public Health Administration (Units 3–6)

SHARED CONTENT TAUGHT IN BOTH PROGRAMMES

- Health-care delivery system in India – Sub-centre, PHC, CHC, HWC, district & tertiary hospitals
- Organization & administration at national, state & district levels
- National health programmes – NHM/NRHM, RCH, Universal Immunization, RNTCP, NACP, NMHP, blindness, malaria, leprosy, iodine
- National health policy & five-year plans
- International health agencies – WHO, UN, World Bank, UNICEF, UNFPA

Difference in emphasis · MPH treats health-systems frameworks (WHO building blocks, van Olmen), the private/NGO sector, CSR and comparative country health systems in depth. MHA covers delivery structure and programmes to the extent a hospital administrator needs.

Ethics

MODERATE
MPH PHC510A – Ethics in Public Health

MHA HAC601C – Legal Aspects & Ethics in Healthcare (ethics part)

SHARED CONTENT TAUGHT IN BOTH PROGRAMMES

- Foundations of ethics – theory & principles
- Organizational influences & ethical implications for health care
- Ethics of quality, safety & patient care
- Ethics & technology; social responsibility
- Priority-setting & resource allocation; professional & moral integrity

Difference in emphasis · MPH is a stand-alone ethics course (community & common good, surveillance & privacy, theories of justice). MHA embeds ethics within a mainly legal / medico-legal course (Acts, jurisprudence, consumer protection, negligence, establishment law).

4 Detailed Content Mapping – Partial Overlaps (2 of 2)

Technology, Informatics & Analytics

MODERATE

MPH PHC602A – Technology in Public Health **MHA** HAC602C – Healthcare Analytics & OR (+ electives HAE605A, HAE607A)

SHARED CONTENT TAUGHT IN BOTH PROGRAMMES

- Health information systems; EHR / EMR
- Decision-support systems
- Data → information → knowledge for decision-making
- Health-data security, privacy & confidentiality

Difference in emphasis · MPH emphasises health-information standards (ICD, SNOMED, DICOM), interoperability, e-Health/mHealth and Health Information Management. MHA emphasises business analytics (descriptive/predictive/prescriptive) and operational research (CPM/PERT, queuing, LP).

Programme Planning & Implementation

MODERATE

MPH PHC603A – Programme Planning & Evaluation; PHE601A – Implementation Science **MHA** HAE608A – Health Programme Design, Planning, Implementation

SHARED CONTENT TAUGHT IN BOTH PROGRAMMES

- Health-programme planning cycle & approaches
- Monitoring & evaluation – formative, process, terminal, outcome/impact
- Goals, objectives, indicators & targets
- Implementation & assessment; logical framework

Difference in emphasis · MPH offers this as a core course plus a dedicated implementation-science elective. MHA offers it as a discipline elective.

ELECTIVE-LEVEL OVERLAPS

THEME	MPH OFFERING	MHA OFFERING	COMMON FOCUS
Evidence-based practice	PHE602A – Evidence Synthesis	HAE610A – Evidenced-based Healthcare	Systematic review, evidence synthesis & evidence-informed decisions
Health economics / financing	Health Economics (MDEC)	HAE518A – Healthcare Costing & Health Financing	Costing, financing & economic evaluation of services
Advanced biostatistics	PHC505A – Biostatistics	HAE517A – Advanced Bio-statistics	Advanced statistical methods for health-sciences research
Patient safety & quality	PHC510A (Quality & Safety themes)	HAE514A – Patient Safety; HAC509C – Quality Mgmt	Patient-safety principles & quality of care

5 What Each Programme Keeps Unique

The overlap lies in method and management foundations — not in each programme's core purpose. Both retain a distinct, identity-defining set of courses that must be preserved.

UNIQUE TO MPH — PUBLIC HEALTH

- Principles & Practice of Public Health
- Public Health Priorities I — Communicable Diseases
- Public Health Priorities II — NCDs & Nutrition
- Health Behaviour & Health Promotion
- Global Health
- Demography & Population Sciences
- Electives: Qualitative Research, Environment & Health, Population Microbiology

UNIQUE TO MHA — HOSPITAL ADMINISTRATION

- Accounting & Financial Management in Healthcare
- Human Resource Management in Healthcare
- Management of Clinical & Non-Clinical Services
- Hospital Planning & Designing
- Quality Management for Healthcare
- Marketing & Strategic Management
- Legal aspects; Electives: Project Mgmt, NABH/NMC, Entrepreneurship

WHAT THIS MEANS

Around 8 of ~15 MPH and ~13 MHA teaching courses share content; the remainder define each programme's professional identity — population health vs. hospital administration.

DESIGN PRINCIPLE

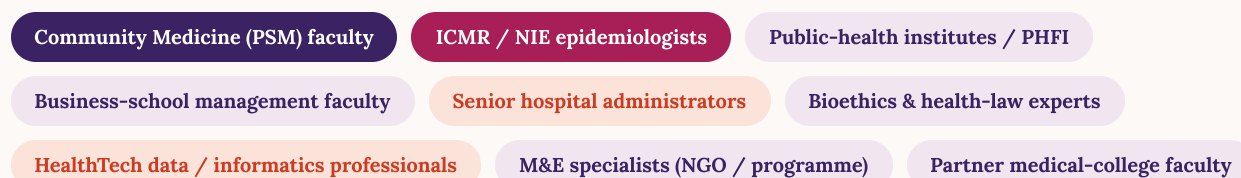

Share the common method & management core; protect the specialised courses that make each award distinct and creditable in its own right.

6 Organising Common Classes — Course Leaders & Experts

Each common course can run as a combined MPH + MHA class, led by an internal department or an invited external subject expert. External experts are suggested categories, not named individuals.

COMMON COURSE	SUGGESTED EXTERNAL SUBJECT EXPERT	DELIVERY MODE
Healthcare Management & Leadership PHC504B ↔ HAC510C	Senior hospital administrator / CEO; healthcare-leadership faculty from a business school; health-sector management consultant	Single combined class
Biostatistics PHC505A ↔ HAC511C	Biostatistician from a public-health institute / ICMR centre; statistics faculty from a partner medical college	Combined class (statistics)
Research Methodology PHC508A ↔ HAC511C	Senior researcher from ICMR / a public-health foundation; research-methods trainer	Combined; MPH adds tutorial
Epidemiology PHC503A ↔ HAC504C	Field epidemiologist (NIE / India EIS); Community Medicine faculty from a medical college	Combined foundation class
Health Systems & Policy PHC502A ↔ HAC504C	Health-policy specialist from a state health department, PHFI or a health-systems think-tank	Combined lecture series
Ethics PHC510A ↔ HAC601C	Bioethicist from a bioethics centre; a medico-legal / health-law expert	Common module + MHA legal
Technology & Analytics PHC602A ↔ HAC602C	Health-informatics or health-data-analytics professional from the HealthTech industry	Combined foundation
Programme Planning PHC603A ↔ HAE608A	Monitoring & evaluation (M&E) specialist from an NGO / development / public-health programme	Combined elective class

SUGGESTED SUBJECT-EXPERT SOURCES

"Combined classes let the University teach the shared core once, standardise quality, and bring in specialist external faculty that a single programme might not justify on its own."

Rationale — Shared-class delivery model

7 A Four-Step Path to Shared Classes

1

Confirm the 8 common courses and align their syllabi & timetables across both programmes.

2

Assign an internal course leader and identify an external subject expert for each.

3

Pilot combined classes for the four strongest overlaps (Mgmt, Biostatistics, Research Methods, Epidemiology).

4

Cross-list overlapping electives and review outcomes for full roll-out.

8 Key Decisions Sought

- ✓ Approve a shared quantitative-methods module (Biostatistics + Research Methodology)
- ✓ Approve a common Management & Leadership class across MPH & MHA
- ✓ Endorse combined foundation lectures in Epidemiology, Ethics & Health Systems
- ✓ Approve a panel of internal course leaders + invited external experts
- ✓ Cross-list the overlapping electives (evidence-based, health economics, advanced biostatistics)
- ✓ Preserve each programme's unique, identity-defining courses

"With shared teaching for the common core, the MPH and MHA can run more efficiently, expose both cohorts to specialist expertise, and still preserve the distinct identity of each programme."

Recommendation — Faculty of Life & Allied Health Sciences, MSRUAS

Source documents: MPH Programme & Course Specifications 2022 (Approved); Programme Structure and Course Details of MHA 2022–2024 (Approved by the Academic Council, 14 July 2022). Content mapped from the approved Course Specifications; overlap percentages are indicative estimates from topic-level comparison.
